GBR Mini Kit

Guided bone regeneration or GBR is a well-known procedure in implant dentistry and used over decades. It is used in all kinds of bone loss cases, from minimal bone loss and tooth extraction to a moderate or a complete bone loss.

This kit is a mini screw kit version for a minor to moderate GBR procedures.

GBR Standard Kit

DSI GBR is the best solution for guided bone regeneration and we equipped the kit only with the best instruments. Our GBR system can be applied to any guided bone regeneration case scenario. The GBR System is comprised of bone screws and bone plates that are used for bone fixation surgery, missing amount of bone, tooth extraction defects in the bone structure and more.

### BONE TACK CASE (to 20 Tack)
Orthodontic
Mini Screws (TADs) & Ortho Tools
Ortho Mini Screw Kit

The toolkit is intended for installation and removal of Orthodontic Mini Screws. All components, including the case, are reusable and sterilizable by autoclaving. All tips are interchangeable to fit in surgical contra-angle.

<table>
<thead>
<tr>
<th>MINI SCREW IMPLANT TOOLS KIT IN AUTOCLAVABLE BOX</th>

</tr>
<tr>
<td>Hexagonal Key Short</td>
<td></td>
</tr>
<tr>
<td>Hand Finger Key</td>
<td></td>
</tr>
<tr>
<td>Driver Handle Holder Tool</td>
<td></td>
</tr>
</tbody>
</table>

The kit for the preparation of Miniscrew installation tools is made of heat resistant engineering polymer able to withstand high temperatures of the autoclave.

All tools, including the case (size: 60x100mm), are autoclavable at 134 °C.
Orthodontic Mini Screw Implant

DSI Miniscrew control is essential for successful orthodontic treatment especially when it is a severe or even critical situation. When "conventional methods" are completely useless. DSI Miniscrew is in direct contact with bone, and does not possess a periodontal ligament. As a result, it does not move when orthodontic/orthopedic force is applied, and therefore can be used as "absolute anchorage".

Transmucosal Margin (TM)

Blade Length (L)

- Channel anchor 0.5mm, the appropriate wires, eyelets and elastic in chain.
- Transmucosal section with perfect adaptation and tissue and peri-implant soft tissues.

info@dsisrael.net
The Orthodontic Miniscrew with Bracket Head is commercialized with installation threads with Clockwise insertion also allowing the application of forces with anchoring of accessories in the 0.53mm x 0.63mm (0.021”x0.025”) slots. Installed by a simplified surgical procedure, through the gum with topical or infiltrative anaesthesia, temporarily fixed to the maxillary or mandibular bone, with the purpose of:

• creating stable anchorage points.
• allowing the application of continuous forces.
• substituting the traditional anchorage systems, or those requiring the patient collaboration, also enabling the performance of more complex orthodontic movements with accuracy and in shorter time.

**Splint Retainer**

A fixed retainer is a medical steel wire arch that is attached to the inside of the teeth with a special compound. DSI Flat Lingual Retainer Wire, ideal for maxillary and mandibular bonded lingual retainers. Will not fray when cut, “dead-soft”, without a material memory, easily formed, and keep the shape perfectly. Can be bonded into place using any type of adhesive.

**DSI RETAINER WIRE**

Adjustment and Finishing
DSI ProxiCut Kit

DSI Proxicut is an innovative, precision dental strip system designed to achieve ideal proximal contact adjustment and complete marginal seating of crowns, veneers, inlays/onlays, and proximal contouring of composite fillings accurately with minimal time and effort.

Proxicut IPR Strip System makes interproximal enamel stripping safe and accurate without creating sharp corners or subgingival ledges. Designed for use with orthodontic treatments, these flexible strips curve and conform to the natural contours of the teeth to maximize patient comfort and safety.

The proxicut comes with a sawtooth edge strip (Blade) for cutting through, and abrasive corrugated surface strip for cleaning the interdental space and polishing the teeth surface.

IPR-SH-24 Kit Includes: 1x Handle holder, 12x Saw Blades, 12x Medium Abrasive Strips.

IPR-SH-48 Kit Includes: 1x Handle holder, 12x Saw Blades, Abrasive Strips – 12x Coarse, 12x Medium, 12x Fine.

Advantages:

- Single-handed, ergonomic design offers optimal tactile control and reduces hand fatigue.
- Eliminates the need to hold small restorations and use rotary instruments or articulating films.
- Central opening for enhanced visual perception and access for tools.
- Patient-friendly design prevents gagging and soft tissue irritation.
- Flexible strips conform to the natural contours of the teeth to avoid creating sharp corners.
- Autoclavable and reusable.
- Will not remove excessive enamel.
- Saves chair-time.
- Effective both in anterior and posterior areas.
DSI ProxiStrip Kit

DSI IPR Strip System is an innovative, precision dental strip system designed to achieve ideal proximal contact adjustment and complete marginal seating of crowns, veneers, inlays/onlays, and proximal contouring of composite fillings accurately with minimal time and effort. ProxiStrip IPR Strip System makes interproximal enamel stripping safe and accurate without creating sharp corners or subgingival ledges. Designed for use with orthodontic treatments, these flexible strips curve and conform to the natural contours of the teeth to maximize patient comfort and safety.

The ProxiStrip comes with a sawtooth edge strip (Blade) for cutting through, and three different types of an abrasive corrugated surface strip for cleaning the interdental space and polishing the teeth surface. Also, the kit includes the key to the holder for opening and closing.

The advantage of the ProxiStrip is the long handle, with which it is possible to reach hard-to-reach places and difficult corners. Kit Includes: 1x Handle + 1x holder, 1x Key, 12x Saw Blades, Abrasive Strips – 12x Coarse, 12x Medium, 12x Fine.

Versatile joint connection – up to 90° angle from the handle axis for maximum performance.
Interproximal Reduction Diamond Burs

IPR burs offer the health care professional, the opportunity to produce rapid, deadly accurate interproximal reduction that is comfortable to the patient. Faster, easier to use, with no gagging reflex. The reduction can now be delivered from as minimal an amount as 0.2mm, right up to 0.5mm. The two most common techniques employed with these burs is a gingival to incisal approach, (whereby the bur is engaged below the contact point and moved occlusally) and the traditional buccal to lingual method.

The special diamond coating prevents micro-fractures in the tooth enamel and the thin burs allow you to achieve the desired tooth slenderization and contouring as quickly and accurately as possible. Careful handling of these precision burs is paramount. Can be used directly or with widening wedges.
